Personal Health Guide

Prepared for: **John Doe** | Date: 27 April 2026

Report Summary

Your blood test results show that your fasting blood glucose and HbA1c levels are high, which suggests diabetes. Additionally, your cholesterol levels are also high, and your hemoglobin is low, indicating possible anemia. These findings may affect your daily life by increasing your risk for health issues like heart disease and fatigue. Managing your blood sugar and cholesterol levels is important for your overall health.

Test	Your Value	Normal Range	Status
Fasting Blood Glucose	142 mg/dL	70 - 110	HIGH
HbA1c (Glycated Haemoglobin)	7.8 %	4.0 - 5.6	HIGH
Haemoglobin	10.2 g/dL	13.0 - 17.5	LOW
Total Cholesterol	218 mg/dL	< 200	HIGH
HDL Cholesterol	38 mg/dL	> 40	LOW
LDL Cholesterol	145 mg/dL	< 130	HIGH
Triglycerides	195 mg/dL	< 150	HIGH
Serum Creatinine	1.1 mg/dL	0.7 - 1.2	NORMAL
eGFR	72 mL/min/1.73m ²	> 60	NORMAL
Platelet Count	1.85 Lakhs/ μ L	1.5 - 4.0	NORMAL
WBC Count	8,200 cells/ μ L	4,000 - 11,000	NORMAL

Specialist Recommendations

Urgency: **Within 1 Week** — The high blood glucose and cholesterol levels require timely evaluation to prevent complications.

- **endocrinologist:** To address the high fasting blood glucose and HbA1c levels, which suggest diabetes.
- **cardiologist:** To evaluate and manage the high cholesterol levels, which may indicate hyperlipidemia.
- **hematologist:** To investigate the low hemoglobin level, which suggests anemia.

Diet Plan

Foods to Eat:

- ✓ **leafy greens (e.g., spinach, kale)** — Rich in iron and vitamins, which can help improve hemoglobin levels and support overall health. (Include in meals daily.)
- ✓ **whole grains (e.g., brown rice, quinoa)** — High in fiber, which can help manage blood sugar levels and improve cholesterol. (1 cup per meal.)
- ✓ **lean proteins (e.g., chicken, fish, legumes)** — Supports muscle health and can help with anemia by providing necessary nutrients. (Include in meals 2-3 times a week.)
- ✓ **nuts and seeds (e.g., almonds, flaxseeds)** — Contain healthy fats that can help manage cholesterol levels. (A small handful daily.)

Foods to Avoid:

- ✗ **sugary beverages (e.g., sodas, sweetened juices)** — Can spike blood sugar levels and contribute to diabetes management issues.

X trans fats (e.g., fried foods, baked goods with hydrogenated oils) — Can worsen hyperlipidemia and increase cholesterol levels.

X red meat and processed meats — Can be high in saturated fats and may not support heart health.

Meal Timing: Aim for regular meal times to help stabilize blood sugar levels, and consider smaller, more frequent meals.

■ Exercise Plan

- **brisk walking** — 30 minutes 5 times a week | Helps improve insulin sensitivity and manage weight.
- **strength training (e.g., bodyweight exercises, resistance bands)** — 20-30 minutes 2-3 times a week | Can help build muscle mass and improve metabolism.

■ Precautions & Safety

- Monitor blood sugar levels regularly.
- Avoid skipping meals to prevent blood sugar spikes or drops.

Emergency Signs — Go to ER immediately:

- Severe fatigue, shortness of breath, or chest pain.
